

## Why use 6 hour burn time liquid chafing fuel

Liquid chafing dish fuel offers various advantages

- Liquid chafing fuels have a longer burn time typically 6 hours
- Long burn times reduce the risk of chafing fuel running out mid service
- Liquid chafing fuels burn but are not highly inflammable as are alcohol chafing fuels and therefore do not have specialist storage requirements
- After putting out half burnt tins of liquid chafing fuel there is no evaporation (as there is with alcohol chafing fuel) This reduces wastage

Warning - always check that your chafing dish is operating at the correct temperature, liquid fuels have lower heat output than gel fuels so for larger chafing dishes or those used in draughty conditions we recommend gel chafing fuels
